ADDING APPS

Question: How do I add additional apps to the box

Solution: Google Play Store has certified (safe) apps to download (Stremio is a good VOD backup app), as well as the Downloader app (orange icon) which is used to download other 3rd party apps. You can also go to the Market app on the home screen (green icon) and under "3rd Party App Store" select Downloader and install it. Open Downloader, if you want to add SmartTube (youtube w/o ads), type the URL: Smarttubenext.com on the URL line and click Go, then scroll down & select Stable, follow installation prompts, allow installation of unknown sources with the Downloader app once settings pop up, then install. SmartTube will now appear in the App's section of the Home Screen (top row).

Example 2: The Onstream downloader code is 597576 (another good backup VOD app). Enter this in the URL line in Downloader, select Go and your installation should start on its own. Click Done, then delete.

WARNING: It is highly suggested to use a VPN if you are going to download 3rd party apps from Downloader or APK as they have a risk level for Malware and Adware.

APP UPDATES

Question: Should I install this Heat Update? Should I allow installation of unknown sources.

Solution: Always install any Heat app updates, unless told otherwise (in the Group). To avoid the “unknown sources” prompt, go to **System settings > Device Preferences > Security & Restrictions > Unknown Sources**, and make sure all of the Heat Apps are enabled.

ARROW/CURSOR

Question: There's an arrow on my screen and I can't use my remote!

Solution: Locate the Cursor button on your remote (computer mouse symbol) and press it once to deactivate cursor mode. The arrow might take up to 5-10 seconds to go away, but you should be able to use your arrow buttons.

BOOT-UP LOOP

Question: My box is stuck in a boot-up loop/re-starting on it's own.

Solution: Unplug the power supply from the back of the box and plug it back in making sure it's in all the way. Next, unplug it from the power outlet it's in, and plug it into a different outlet. Sometimes surge protectors or bad power outlets can cause the box to continually restart. If the issue still exists, then you'll need a new power supply which can be purchased on Amazon > https://www.amazon.com/dp/B0DMTT88VF?ref=ppx_yo2ov_dt_b_fed_asin_title

Adapter is typically marked "5V/2A" / Input: 100–240V AC. Also, any Universal 5V/2A power supply will work. If none of this works and you just so happen to have an LG or Samsung TV, then go into your TV settings and turn "Simplink" off. Also referred to as "CEC" setting on most TVs. This should resolve the issue.

BUFFERING

Question: What causes buffering on my box

Solution: Buffering is most often due to slow/unstable internet, busy servers, high stream quality for your network, or network congestion—even on the high-end V6 Plus. Optimize your network and use quality sources for the smoothest experience.

Internet Connection Issues

- Slow speeds: Not enough bandwidth for HD/4K streams (aim for 25–50 Mbps for smooth 4K).
- Unstable WiFi: Weak signal, interference, or poor router placement.
- Network congestion: Other devices in your home using lots of data/bandwidth (downloads, gaming, streaming).

Streaming Server Problems

- The streaming app's server is overloaded or slow–especially at peak times.

Continue to the next slide

vSeeBox
vSee, We Enjoy Together!

vSeeBox Official SoCal *Sales & Support*

BUFFERING - continued

Incorrect App or Box Settings
- Playback quality set too high for your network conditions (e.g., playing 8K or high-bitrate 4K on a slow connection).
- Outdated app versions or firmware/software on the box.

Device or Hardware Issues
- Overheating (rare, but possible in cramped spots).
- Running too many apps in the background. Make sure to click on the Clear Memory icon on the home page, daily.
- Internal storage nearly full (clear cache regularly 3-4x wk).

Router & Network Configuration
- Using 2.4 GHz WiFi instead of faster, less crowded 5 GHz if your router.
- Old router or outdated firmware.
- Suboptimal DNS settings.

Continue to the next slide

BUFFERING - continued

VPN/Proxy Use

Using a VPN can reduce WiFi speed by 50-80% on streaming boxes, leading to more buffering if your base connection isn't very fast.

Bad/Slow HDMI handshake

Rare, but sometimes cable/TV handshaking issues can briefly interrupt streams, especially when using eARC or long HDMI cables.

How to Reduce Buffering -

- Use a wired Ethernet connection for best stability.
- Reboot your router & vSee box.
- Lower stream quality (from 8K/4K to HD or SD) in the app during busy network periods.
- Close unused apps and clear cache regularly (3-4x a wk)
- Place your router and box where WiFi signal is maximized; avoid thick walls/interference.

CLEARING CACHE

Question: How do I clear cache on my box?

Solution: For the V2, Max, V5 Pro, Elite and Elite Ultra go to System settings > Device preferences > Storage > Internal Shared Storage > Cached data > Clear Cached Data? > OK.

For the V3 Pro, V3 Plus and V3 Prime go to System settings > Apps > locate each app you use frequently and select “Clear cache”

For the v6 Plus and v6 Max, System settings > Device Preferences >Storage > Cached Data > Clear Cached Data for All Apps.

Be sure to select “Clear Cache” and not “Clear Data” or it’ll delete your favorites list. Clearing cache is a good maintenance practice and is recommended to do at least 3x weekly to keep the box running smoothly.

CONNECTION ISSUES

Question: My screen is green/purple with lines through it. /My screen says it can't connect to input/source (HDMI).

Solution: Green lines or a Purple screen indicate either a bad connection with the HDMI cable or a bad HDMI cable in general. First, try a different HDMI input on your TV, and also check to make sure the connection is snug in the box and TV ports. If this doesn't resolve the issue, then replace the HDMI cable with an HDMI 2.1 cable (8K@60Hz and 4K@120Hz video/ Up to 48Gbps bandwidth).
If your screen is saying it can't connect to the input this is typically solved by either trying a different HDMI input or simply rebooting the box while the TV is still on (unplug the box and plug it back in) and it usually detects the input signal on the reboot.

COPY HEAT LIVE FAVORITES

Question: Is there a way to save my favorites from one box to another

Solution: Yes, but only with the Heat Live app. You cannot copy your VOD favorites.

While watching a TV channel in Heat Live, hit the Ok button to bring up the guide on the left side of the screen. Scroll all the way to the top of the screen and click on **Menu > Share Favorite > Generate a Share Code**, then click on the Generate Share Code button. A 6 digit number will show up. Write it down.

Then, go to your other box, repeat the steps above by going to **Menu > Share Favorite, but this time you click on > Enter a Share Code,** then enter the 6 digit code you wrote down. This will copy your favorites from the 1st box onto the 2nd box so that you don't have to re-favorite the channels.

FAVORITES

Question: How do I save a channel, movie or TV series to my favorites list?

Solution: Heat Live, Heat Backup > while watching a channel, press the “OK” button. Highlight a channel that you want to favorite, you can either long-hold the Ok button for 2 seconds then let go, or your remote might have the FAV button (directly below the #7 button). A heart symbol should appear indicating you’ve successfully saved it.

Heat VOD / Ultra VOD > Search for the movie or Tv Series that you want to favorite, long press the Ok button until the heart fills up

INTERNET SPEED NUMBERS

Question: How do I get the numbers in the upper right-hand corner of the screen to go away?

Solution: While viewing a channel, press the Menu button on the remote, then select “settings” and uncheck “make Internet speed visible.”

vSeeBox Official SoCal *Sales & Support*

MEMORY CLEANUP

Question: What is the Memory Cleanup button

Solution: It's a RAM refresher tool that clears memory used by idle apps to improve performance. It's a built-in quick optimization feature designed to free up system memory (RAM) and close background apps to keep your device running smoothly.

When you press it, it instantly terminates background apps and processes that remain running after you exit them. It releases temp cache files stored in RAM, to reduce lag, buffering, or stuttering in the apps.

What It Does Not Do -

It does not delete app data, logins, or permanent cache files saved on storage.

Use it before launching a heavy app or after streaming for several hours.

Suggested to click on that button 1x a day or whenever the box feels slow or laggy.

vSeeBox Official SoCal *Sales & Support*

NARRATION

Question: How do I get the narration to go away while watching a show/movie/tv series

Solution: Start playing the show or movie where you hear the narration. Within Heat Live, press the menu button. A submenu will appear at the bottom of your screen.

Navigate to Audio tract. If possible, choose an audio track that does not include words like *Audio Description*, *Descriptive Narration*, or *DVS*. Select the normal English (or primary) track to remove narration. It's possible that there are no options.

Within the VOD apps, press the up arrow or menu button and look for Track. It's possible that there will be no option as well.

If the narration continues or you couldn't change it above, it's likely the Android TalkBack feature or Google Speech Services is active. From the home screen, go to Settings → Device Preferences → Accessibility, find TalkBack/Text to speech and toggle it Off.

If narration still exists, go to Settings → Apps → See All Apps > System Apps → Google Speech Services and disable it. If narration appears only in certain movies or Ultra VOD titles, it might be baked into the content (i.e., supplied with only one descriptive track). In that case, try playing the same title from a different app or server.

To stop it from recurring, make sure Google Assistant voice feedback isn't active by going to Settings → Google → Assistant → Accessibility and turning voice feedback off.

POWER OFF, SLEEP, or LEAVE ON

Power Off/Shut Down:

If you will not be using the box for an extended period, it is best to fully shut down (power off) the device. This helps free up internal storage, ensures smoother performance on next startup, and avoids running unnecessary background processes or consuming power while idle.

Sleep/Suspend Mode:

Use sleep mode when taking only a short break (or plan to resume watching within the same day). Sleep mode keeps the box partially active, allowing for quick wake-up and instant resume for streaming or apps. It is convenient but consumes a small amount of standby power.

Leaving On:

If you stream throughout the day and want instant access between sessions, it is safe to leave the box on—but this consumes the most power and can gradually fill up memory/cache, possibly causing slower performance over time.

PAIR REMOTE PROMPTS

Question: I'm getting a screen that prompts me to pair my remote to the box

Solution: On the home screen go to **System setting > Bluetooth > Paired Device Management > VSeeBox Remoter > Unpair.** While your remote is in infrared mode, click on Pair new device to re-pair your VSEE remote via Bluetooth. This will prompt you to hold the "OK" button & "Volume down" button at the same time until the blue light starts to flash and will re-pair your remote.

SOUND/VOLUME

Question: My sound is cutting in & out constantly with the volume fluctuating!

Solution: This is a known problem with Vizio and Samsung brand TVs. Go into the main menu of the TV and click on “Audio settings” and look for a setting called “Leveling” or “Volume leveling” and shut it off. This should resolve the issue.

vSeeBox

vSeeBox Official SoCal *Sales & Support*

SUBTITLE

Question: How do I turn on/off Subtitles/Closed Caption

Solution: Subtitles/Closed Caption is only an option in the VOD apps, not the Heat Live.
Press the up arrow or menu button while watching VOD content. Click on Subtitle. If there is an option, select it. Some content have none, and this is based on the source where that the content came from. To turn off, click on None.

VOD APPS FREEZING

Question: My Heat VOD/Heat Ultra keeps freezing!

Solution: For Heat VOD, while watching the show, click on the up arrow or Menu button. You should see Servers at the bottom. Select another server.
For Heat Ultra, press the up arrow while watching something to and click on Quality to see if you have options (Best, High or Normal). You can adjust the Quality to improve stabilization. Not all shows/movies offer different Quality options.

VOD ULTRA FOLDER NAMES

Question: What do the abbreviation letters stand for in the VOD ULTRA app?

Solution:

- **Amz** = Amazon
- **MA** = Movies Anywhere (sometimes also labeled "Mature Audience" in other contexts)
- **FAS** = Fawsome
- **MAX** = HBO Max
- **NF** = Netflix
- **VK** = Viki (Asian influenced streaming content)
- **AT+** = Apple TV+
- **BET** = Black Entertainment TV
- **PEA** = Peacock
- **PM+** = Paramount+
- **HUL** = Hulu
- **DS+** = Disney+
- **STZ** = Starz
- **FUB** = Fubo
- **DTV** = Direct TV
- **DIS+** = Discovery+
- **PLU** = Pluto
- **CW** = CW
- **Free** = Freevee
- **PLX** = PLEX
- **Rok** = Roku

VOICE COMMAND

Question: Why isn't my voice to text feature working on other apps, only the Heat apps?

Solution: Almost all 3rd party apps require you to click the "Ok" button on the on-screen keyboard microphone symbol to activate the voice feature. Only the Heat apps allow you to use the actual microphone button on your remote.

vSeeBox
vSee, We Enjoy Together!

vSeeBox Official SoCal *Sales & Support*

VPN

Question: Do I need a VPN for my VSeeBox?

Solution: With the v2, v3, v5,& v6 models, no, a VPN is not necessary because the Heat apps come pre-encrypted. A VPN would/could diminish your WiFi speed by 50% to 80%, depending on the VPN provider, server location, device power, and network congestion. However, it is **strongly** suggested to use a VPN with 3rd party apps on the Elite, Elite Ultra & Elite Mini models, and if you choose to download unsecured 3rd party apps from Downloader or APK on your box. Malware/Adware risks. Always research the risk of the apps you are wanting to download before doing so.

7-DAY PLAYBACK

Question: How do I use the 7-day Playback feature?

Solution: Open Heat Live or Heat Backup, scroll through the channels and locate the ones that have the circular arrow and play symbol,

then hit the right arrow to see the schedule/lineup and hit the up arrow to go back in time to the day/time you're looking to view a program that's already aired. Once you've found it, click on it to play. To end playback simply hit your back button and select "Live."
